Delta Specialty Solutions

PS8000 Pre-Soak

Softening Soak solution formulation is especially effective in loosening deposits that have formed in the cooling passages of any water-operated equipment. Cuts slime in tower systems and prepares for descaling jobs.

PS8300 Bio-Soak

Biomass Penetrant removes bio-growth and algae formations before any equipment descaling and cleaning operations. It safely removes both organic and other build-up from water-cooled equipment with or without descaling.

CC 8630 Coil Cleaner

Airside Finned Coil Foam is formulated as an alkaline foaming penetrant and deposit dispersant for use in finned coil systems and cooling units. This safe but highly concentrated solution can be diluted up to 15:1 to adjust cleaning strength for each application. Foam expands to safely eject all dirt & grime.

Foam-EX Defoamer

Descaler Defoamer is formulated as an alternative control method for all excessive foaming situations. A few ounces will kill most surface foaming. Silicone-based for use in all applications where simple control is desired.

AC9770 RustCoat M

Multi-Metals Film for protecting freshly exposed bare metals after a thorough descaling. Prevents flash rust and immediate corrosion from forming after we safely remove all those insulating deposits from your fouled equipment. Add to the rinse water during the descaling flush to prevent all rust from attacking.
